

Data Sheet for ProReport

ProReport

ProReport is a web-based data-analytics tool for enterprises, empowering administrators to take an in-depth look into the flood of data that streams in from all connected devices and systems from within the Internet of Things (IoT.) By analyzing incoming data with ProReport, vulnerabilities and deficiencies can be discovered quickly and efficiently, allowing administrators to adjust business processes and become more effective.

In addition to summarized data and results, reports also include graphs and charts that are pleasing to the eye, and most importantly, update dynamically to ensure leadership has the most accurate information.

Users can choose from over twenty of the most popular reports from ProReport and are delivered as a standard PDF or Excel file. If custom reports are needed, users can configure custom reports from within ProReport, enabling enterprises to see their data exactly how they want it. To improve and simplify creating and generating reports, report automation is built into ProReport, allowing reports to be automatically generated and delivered on a schedule via email.

ProReport makes data analyzation easy and intuitive so that business leaders can make business-critical decisions and save costs while making it easy.
